👤 Summary

Software Engineer with 6+ years of experience designing scalable backend systems, distributed event-driven architectures, and cloud-native applications. Expertise in Python, AWS, Kubernetes, Kafka, PostgreSQL, Redis, Terraform, and CI/CD automation. Proven track record of improving system performance, accelerating software delivery, and building reliable services at scale.

🧰 Professional Experience

Software Engineer, Basis Technologies 04/2022 – Present | Albuquerque, NM

- Architected and implemented scalable Python backend services supporting \$1B+ annual advertising spend and processing millions of campaign events daily.
- Created 15+ REST APIs and microservices that improved reliability and reduced integration effort across customer facing and internal platform systems.
- Orchestrated Kafka and RabbitMQ event pipelines processing millions of messages per day, enabling near real-time advertising analytics and reporting.
- Optimized PostgreSQL queries, indexing strategies, and Redis caching layers, reducing API response times by 40–60% and improving system throughput.
- Deployed and containerized 20+ services on AWS using Docker, Kubernetes, and Terraform, reducing deployment times by 70%.
- Strengthened observability through Datadog monitoring and centralized logging, reducing incident detection and troubleshooting time by 50%.
- Established CI/CD pipelines that reduced release cycles from days to hours while maintaining 99.9% service availability.
- Partnered with cross-functional teams to deliver features supporting 1000+ advertisers and internal stakeholders.

SDET/Automation Engineer, LightBox 01/2020 – 04/2022 | New York, NY

- Designed and executed Python automation frameworks covering 200+ API, UI, and integration test scenarios, increasing regression coverage by 60%.
- Integrated third-party APIs and constructed end-to-end test suites that reduced manual QA effort by 30+ hours per sprint.
- Implemented Jenkins and GitHub Actions validation workflows, cutting release verification time by 75%.
- Collaborated with engineering teams to identify and resolve 100+ production and pre-release defects.
- Crafted automated environment management solutions that reduced environment setup time from hours to minutes.
- Analyzed application logs and database activity to accelerate root-cause analysis and decrease production issue resolution times by 40%.

Software Engineer, DaveSimmons.io 12/2018 – 2022 | Albuquerque, NM

- Engineered full-stack web applications and backend services for 20+ client engagements across real estate, healthcare, e-commerce, and financial services industries.
- Delivered custom REST APIs and workflow automation solutions that reduced operational overhead by 25–40% for client organizations.
- Partnered directly with stakeholders to gather requirements and deliver projects valued at \$20M+.
- Contributed across architecture, development, testing, deployment, and production support for 10+ web applications.
- Managed 5+ concurrent client projects while consistently meeting delivery timelines and quality standards.

🎓 Education

Bachelor of Science, La Sierra University

2011 – 2016 | Riverside, CA
